

## How the air is managed and distributed around your home determines the efficiency of the system and how comfortable you feel.

If you could peek inside the roof space, you'd see we don't use the off-the-shelf components our competitors do because frankly, we don't think they're good enough. Instead, we invested millions of dollars into R&D to design and manufacture our own. It was the only way we could build an air-conditioning system that lived up to our standards of control and comfort.

### Ducting

Advantage Air's are silver for greater heat reflection. See page 5.

### Zone Control

We zone each room individually so you can control exactly which rooms receive air. See page 3.

### Exact Air Regulator

They control how much air goes to each zone. Only Advantage Air's can be accurately adjusted in 10% increments. See page 4.

### Diffuser

Where the air enters the room. Advantage Air gives you a range of styles to choose from. See page 7.

### Indoor Unit

Houses the fan unit that distributes air around the house.

### Outdoor unit or compressor

Your installer will recommend what size you need based on the size of your home.

### Return Air Grille and Filter

Advantage Air provides 30% better filtration than ordinary filters. See page 6.
